

Cooperation between the Ukraine and the European Union: Practical Cases

Additives for motor oils and bio fuels on the basis of business waste recycling

The share of bio fuels will rise to the European market in the coming years. Therefore there is a need of to adjust the values of mineral-based fuels as near as possible. Thereby the detrimental effect can be reduced to the fuel systems and engine parts, and at the same time also the emissions are being reduced significantly. This adjustment of the fuel properties is only possible for the use of special fuel additives. These fuel additives are to be produced from the operation of waste. The contribution is made for environmental conservation.

Expected Results:

The Programme STC

The scientific-technological cooperation (STC) between Germany and Ukraine has a long tradition. It is becoming even more important by the prominent role of Ukraine in the framework of the Neighbourhood Policy of the European Union.

It focuses on the following research areas:

- Biotechnology and Technologies for effective use of resources and energy, sustainable environmental technologies
- Health and Medical research
- Information and Communication Technologies
- Nanotechnologies, materials and new production technologies

BILAT Ukraine

The main objectives of BILAT-UKR are:

- to strengthen the S&T cooperation between the EU and Ukraine
- to improve the framework for enhanced future and sustainable S&T cooperation between the EU and Ukraine
- to provide support for the working groups set up in Ukraine with the aim to organize a thorough thematic and high level policy dialogue between the Ministry of Education and Science of Ukraine and the European Commission.
